Claire Whiting

claire.whiting@princeton.edu | clairewhiting.com | Princeton, NJ

Researcher in emotion regulation, mental health and language across ages. Runs experimental and naturalistic studies, analyzes data with mixed methods, and applies AI to study design and analysis. Interested in health, well-being and education research.

EDUCATION

Princeton University — Ph.D., Psychology; M.A., Psychology (2024) Expected graduation: 06/28
University College London & Yale University — M.Res., Developmental Neuroscience & Psychopathology (Distinction) 2022
University of Cambridge — B.A. (Hons), Natural Sciences (Double First) 2020

RESEARCH EXPERIENCE

Ph.D. Researcher, Princeton University (Adviser: Erik Nook) 2022–present

- **Linguistic markers of emotion regulation across ages:** Led four lab, online, and field experiments (N = 4,293; incl. high school students) showing that a linguistic marker of psychological distance tracks with successful emotion regulation.
- **Language markers of mental health in therapy:** Analyzed text-based therapy messages (~7,000 adolescents; 678K messages), to examine links between linguistic markers (e.g., psychological distance, language complexity) and anxiety and depression.
- **Writing intervention for emotions and mental health:** Ran a 14-day, three-arm diary intervention (N = 159; 2,200+ writing entries) testing whether writing to oneself or a close other improves mental health. Benefits differed between conditions, and word-embedding measures of self-representation (how good vs. bad one views themself) tracked daily emotions.
- **Qualitative analysis of diary entries:** Led thematic analysis of 2,200+ entries: built a codebook (topic themes, emotion regulation strategies); trained and managed two coder teams.
- **AI for emotion regulation research:** Developing prompts for an LLM chatbot that guides people through reappraising an upsetting experience (study in preparation) and an LLM-assisted pipeline for qualitative coding of text data.
- **Multi-country study lead:** Leading a global multi-site Psychological Science Accelerator study of 13,000+ participants across 25+ countries; ran the online US-based pilot (N = 200); now writing the registered report.
- **Treatment acceptability:** Ran two experiments (N = 1,010) showing that religiosity was associated with Mindfulness-Based Cognitive Therapy acceptability. Framing the study as religious vs. scientific did not influence acceptability, but addressing concerns did.
- **Funding:** Won $67K across four competitive grants.

M.Res. Researcher, Yale Child Study Center (Adviser: Wan-Ling Tseng) 2021–2022

- **Measure development:** Designed and validated a new measure of family accommodation of irritability.
- **Neuroimaging:** Linked regional brain activity (fMRI) during an emotional task to sleep duration and problems in 9–15-year-olds.

Research Assistant, East London NHS Foundation Trust 2020–2021

- Conducted a systematic review and meta-analysis of treatments for offenders with personality disorders; shadowed clinical staff in a medium secure unit; improved the unit's clinical databases.

SKILLS

- Experimental design (lab, online, field), survey design and psychometrics, diary studies, statistical analysis, large-scale text analysis, NLP, LLM prompting, thematic analysis, fMRI, preregistration, IRB protocols
- Tools: R, Qualtrics, Gorilla Experiment Builder, Prolific

SELECTED PUBLICATIONS

- **Whiting, C.**, et al. (2026). Family accommodation of pediatric irritability: Development and psychometrics of the Family Accommodation Scale for Irritability. *Behavior Therapy*.
- **Whiting, C.**, et al. (2023). Associations between sleep quality and irritability: Testing the mediating role of emotion regulation. *Personality and Individual Differences*.

- **Whiting, C.**, & Nook, E.C. (in revision, *Perspectives on Psychological Science*). A systematic review of research on emotion differentiation and emotion regulation.
- **Whiting, C.**, et al. (under review). Distanced language is a correlate, not a cause, of reappraisal success.

COMMUNICATION, SERVICE & AWARDS

- Presented 14 talks and posters; TA for 3 courses; McGraw Center Graduate Teaching Fellow; mentored 10 undergraduates.
- Graduate School Teaching Award, Princeton (2026); STEM Star Award, Princeton Center on Science and Technology (2026); Best Poster Award, Society for Affective Science (2024); Bridge Research Prize for best thesis, UCL/Anna Freud Centre (2022); Dr. Kaetrin V. Simpson Prize for top Natural Sciences rank, Christ's College, University of Cambridge (2020).
- University Administrative Fellow, Princeton's Center on Science and Technology (2024–present): research and event programming for Princeton Better for Birds Project, contributed to the 2046 Sustainability Action Plan.
